stub network: are there options?

 outbound packets have to be sent through the link in order to reach the internet

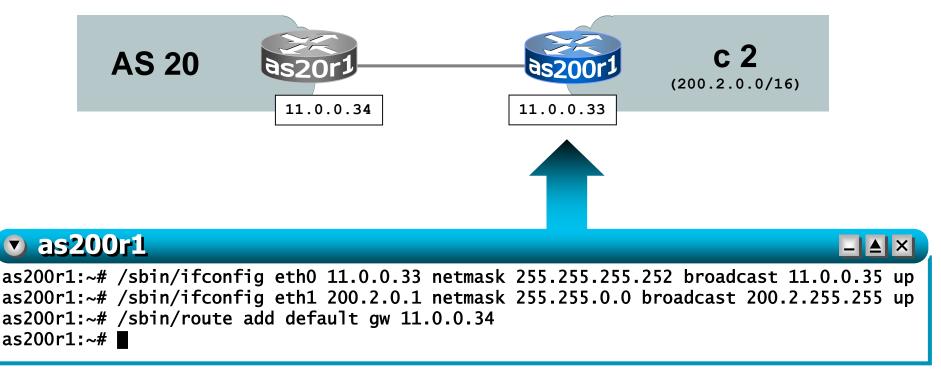

inboud packets have to be sent through the link in order to reach the new network

stub network with static routes

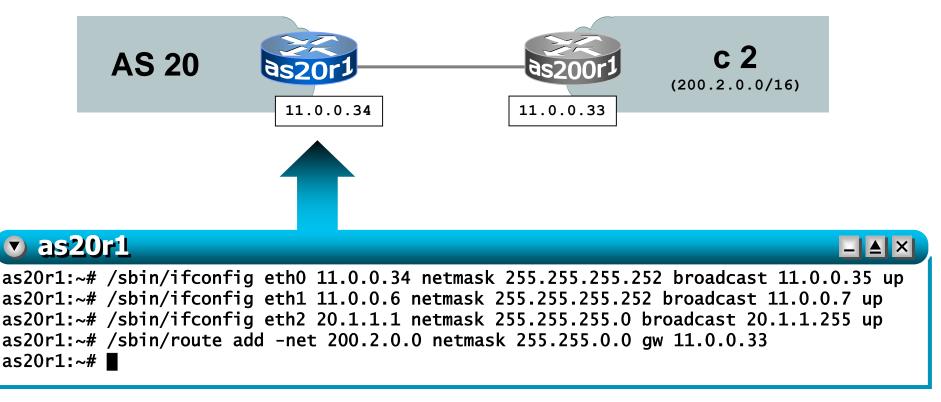

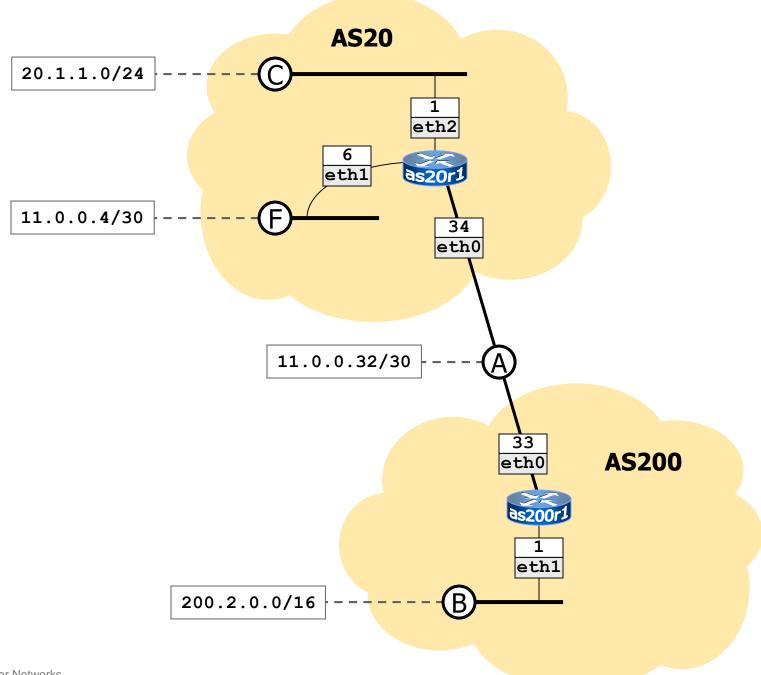

- a default static route is sufficient for the outbound packets to be sent to the internet through the link
- a static route is sufficient for inbound packets to be sent to the new network through the link
- no choices ⇒ no need for bgp

router as 200r1 w/ static route

router as 20r1 w/ static route

stub with static routes

launch the script

```
    host machine
    user@localhost:~$ cd kathara-lab_bgp-stub-as-static
    user@localhost:~/kathara-lab_bgp-stub-as-static$ lstart
```

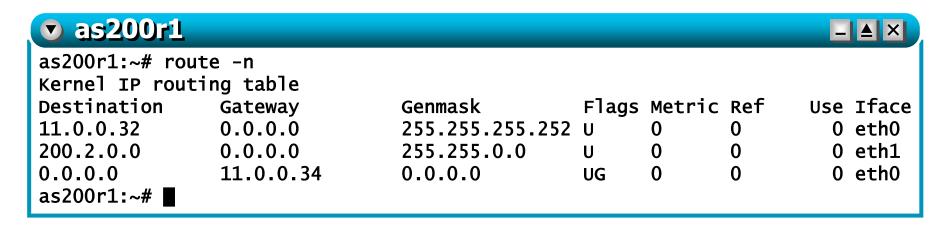

check the routing table of as20r1

```
    as20r1

                                                                         _ ≜ ×
as20r1:~# route -n
Kernel IP routing table
                                                  Flags Metric Ref
Destination
                                                                       Use Iface
                Gateway

                                                  UG
as20r1:~# ■
```

stub with static routes

check the routing table of as200r1

- try pinging 20.1.1.1
- terminate the lab
